

Correct. To convert from radians to degrees, multiply the radian measure by $\frac{180^\circ}{\pi}$:

$$\frac{\pi}{5} = \frac{\pi}{5} \cdot \frac{180^\circ}{\pi} = \frac{180^\circ}{5} = 36^\circ$$

$$\frac{7\pi}{9} = \frac{7\pi}{9} \cdot \frac{180^\circ}{\pi} = \frac{7}{1} \cdot \frac{180^\circ}{9} = 7 \cdot 20^\circ = 140^\circ$$

$$2 = \frac{2}{1} \cdot \frac{180^\circ}{\pi} = \frac{360^\circ}{\pi} = 114.59\dots^\circ \approx 115^\circ$$
