Correct. To convert from radians to degrees, multiply the radian measure by $\frac{180^\circ}{\pi}$:

$$\frac{3\pi}{5} = \frac{3\pi}{5} \cdot \frac{180^\circ}{\pi} = \frac{540^\circ}{5} = 108^\circ$$

$$\frac{4\pi}{9} = \frac{4\pi}{9} \cdot \frac{180^\circ}{\pi} = \frac{4}{1} \cdot \frac{180^\circ}{9} = 4 \cdot 20^\circ = 80^\circ$$

$$3 = \frac{3}{1} \cdot \frac{180^\circ}{\pi} = \frac{540^\circ}{\pi} = 171.887\ldots^\circ \approx 172^\circ$$
