In yesterday's basketball game, Aaron scored 24 points with a combination of 2-point and 3-point baskets. The number of 2-point baskets he made was 2 more than the number of 3-point baskets he made.

The graph below shows one way of understanding this information. The *x*-axis represents the number of 2-point baskets, and the *y*-axis represents the number of 3-point baskets.

How many of each type of basket did he score?
