

Jem is at the candy store buying jelly beans in bulk for a large birthday celebration. The store owner asks Jem how many pounds he wants, and reminds him that the price is \$6.50 a pound. Jem tells him that he is looking to buy 40 pounds of jelly beans, but up to 2 pounds above or below that target is acceptable.

Given the price of the jelly beans, graph the range of dollars ( $d$ ) that Jem could spend on the jelly beans.
