

To find the domain, factor the expression and then identify which values of x will result in a denominator of 0 before simplifying. In this expression, $\frac{5x^3 + 15x^2 + 10x}{3x^3 - 3x} = \frac{5x(x + 2)(x + 1)}{3x(x - 1)(x + 1)}$. What values of x are not included in the domain?
