| Sophie is thinking of a sequence of numbers in which every number (after the first) is it. Which of the following sequences match that description? | $\frac{2}{3}$ times the number before |
|---|---------------------------------------|
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
|   |                                       |
