

The divisibility rules can be used to show that 1, 2, 5, and 10 are factors (and that 3, 4, 6, and 9 are not). Use factor pairs to find the rest of the factors: 11, 22, 55, and 110. Use division to check 7 and 8. Since $110 \div 11$ is less than 11, stop.
