

Correct. $11,430 \cdot 14 \text{ ounces} = 160,020 \text{ ounces}$. Convert ounces to tons:

$$160,020 \text{ ounces} \cdot \frac{1 \text{ pound}}{16 \text{ ounces}} \cdot \frac{1 \text{ ton}}{2,000 \text{ pounds}} = 5.000625 \text{ tons, which is about 5 tons.}$$
