Incorrect. Move the decimal point to the right until you get a number between 1 and 10. For the given number, this would be 1.53. Multiply the decimal by 10 raised to a negative power equal to the number of places you moved the decimal point. The decimal 0.000000000153 expressed in scientific notation is 1.53×10^{-10}. The correct answer is -10.
