Correct. Substitute $6x - 6$ for *y* in the first equation: $-3(6x - 6) + 8x = 18$

Simplify and solve for *x*: $-18x + 18 + 8x = 18, -10x + 18 = 18, x = 0$

Substitute this value for *x* back into the second equation: $y = 6(0) - 6 = -6$
