

Correct. Evaluate the function for each input of x to find the output $f(x)$.

$$f(1) = \sqrt{1+3} = \sqrt{4} = \sqrt{2^2} = 2$$

$$f(6) = \sqrt{6+3} = \sqrt{9} = \sqrt{3^2} = 3$$

$$f(22) = \sqrt{22+3} = \sqrt{25} = \sqrt{5^2} = 5$$
