

Correct. Make a table of values with inputs  $-2$ ,  $-1$ ,  $0$ ,  $1$ , and  $2$ , for example. Evaluate the function for each value of  $x$ , and record the output,  $f(x)$ . Each row in your table forms an ordered pair. These points would be  $(-2, 0)$ ,  $(-1, -1)$ ,  $(0, -2)$ ,  $(1, -3)$ , and  $(2, -4)$ . Plot the points. Connect the points in a straight line.
