

Correct. The mean is the sum of all the numbers divided by the number of numbers in the data set: $\frac{283}{31} = 9.1$

The values in order from least to greatest are:

4, 4, 4, 4, 5, 5, 6, 7, 7, 8, 8, 9, 9, 9, 9, 10, 10, 10, 10, 11, 11, 11, 11, 11, 12, 12, 13, 13, 13, 13, 14

The median is the number in the middle of the list: 10. The number 11 appears five times on the list, more than any other number, so it is the mode. The range is $14 - 4 = 10$.

Calculate the midrange in this way: $\frac{14 + 4}{2} = \frac{18}{2} = 9$
